

### High-Pressure Quick Couplings SnowMaster by **LUDECKE**®

SnowMaster by **LUDECKE**® coupling systems guarantee excellent operating safety when supplying your installation with water, even in extreme conditions.

#### Attention:

- Make sure to use appropriate type sizes and adequate hoses.
- Make sure to use the right stem profile for the chosen hose assembly method.
- The couplings and plugs have to be tested for damage and abrasion before and during use. If there should be any defects, the fittings can't be used anymore.
- The assembly of hose and couplings has to be done properly by experts.
- When assembling / disassembling the couplings, it has to be guaranteed, that there is no pressure inside the line.
- During the application always use the handle protection to avoid accidental opening!

#### Technical Specifications:

|                        |   |
|------------------------|---|
| Max. working pressure: | 60 bar (type size 250 max. 40 bar)          |
| Medium:                | Water (temperature of medium: -5°C – +95°C) |

Please only use original spare parts for repair or replacement!

#### Warning:

The wrong selection or wrong and improper handling of SnowMaster by **LUDECKE**® fittings and accessories can lead to serious property damage and human injury at high operating pressures.
